University of Mumbai

No. AAMS_UGS/ICC/2022-23/118

CIRCULAR :-

Attention of the Principals of the Affiliated Colleges and Directors of the recognized Institutions in Faculty of Science & Technology is invited to this office circular No.UG/42 of 2018-19 dated 25thJune, 2018 relating to the revised syllabus for the T.E. & B.E. in Electronics & Telecommunication Engineering (Sem. – V to VIII) (CBCS).

They are hereby informed that the recommendations made by the Ad-hoc Board of Studies in Electronics and Telecommunication Engineering at its meeting held on 11th May, 2022 and subsequently passed in the Faculty and then by the Board of Deans at its meeting held on 5th July, 2022 vide item No. 6.30 (R) have been accepted by the Academic Council at its meeting held on 11th July, 2022 vide item No. 6.30 (R) and that in accordance therewith, the revised syllabus of B.E.(Electronics and Telecommunication Engineering) (Sem. - VII & VIII) (CBCS) (REV-2019 °C' Scheme) has been brought into force with effect from the academic year 2022-23. (The circular is available on the University's website www.mu.ac.in).

MUMBAI - 400 032 2.0th October, 2022

(Dr. Shailendra Deolankar) I/c Registrar

To:

The Principals of the Affiliated Colleges and Directors of the recognized Institutions in Faculty of Science & Technology.

........

A.C/6.30(R)/11/07/2022

No. AAMS_UGS/ICC/ 2022-23/ \ \g

2.0th October, 2022

Copy forwarded with Compliments for information to:-

- 1) The Dean, Faculty of Science & Technology,
- 2) The Chairman, Ad-hoc Board of Studies in Electronics and Telecommunication Engineering.
- 3) The Director, Board of Examinations and Evaluation,
- 4) The Director, Board of Students Development,
- 5) The Director, Department of Information & Communication Technology,
- 6) The Co-ordinator, MKCL.

Dr Anuradha Majumdar Dean, Faculty of Science and Technology

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty resolved that course objectives and course outcomes are to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. Choice based Credit and grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 13 weeks and remaining 2 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

There was a concern that the earlier revised curriculum more focused on providing information and knowledge across various domains of the said program, which led to heavily loading of students in terms of direct contact hours. In this regard, faculty of science and technology resolved that to minimize the burden of contact hours, total credits of entire program will be of 171, wherein focus is not only on providing knowledge but also on building skills, attitude and self learning. Therefore in the present curriculum skill based laboratories and mini projects are made mandatory across all disciplines of engineering in second and third year of programs, which will definitely facilitate self learning of students. The overall credits and approach of curriculum proposed in the present revision is in line with AICTE model curriculum.

The present curriculum will be implemented for Second Year of Engineering from the academic year 2020-21. Subsequently this will be carried forward for Third Year and Final Year Engineering in the academic years 2021-22, 2022-23, respectively.

Dr. S. K. Ukarande Associate Dean Faculty of Science and Technology University of Mumbai Dr Anuradha Muzumdar Dean Faculty of Science and Technology University of Mumbai

Incorporation and Implementation of Online Contents from NPTEL/ Swayam Platform

The curriculum revision is mainly focused on knowledge component, skill based activities and project based activities. Self learning opportunities are provided to learners. In the revision process this time in particular Revised syllabus of 'C ' scheme wherever possible additional resource links of platforms such as NPTEL, Swayam are appropriately provided. In an earlier revision of curriculum in the year 2012 and 2016 in Revised scheme 'A' and 'B' respectively, efforts were made to use online contents more appropriately as additional learning materials to enhance learning of students.

In the current revision based on the recommendation of AICTE model curriculum overall credits are reduced to 171, to provide opportunity of self learning to learner. Learners are now getting sufficient time for self learning either through online courses or additional projects for enhancing their knowledge and skill sets.

The Principals/ HoD's/ Faculties of all the institute are required to motivate and encourage learners to use additional online resources available on platforms such as NPTEL/ Swayam. Learners can be advised to take up online courses, on successful completion they are required to submit certification for the same. This will definitely help learners to facilitate their enhanced learning based on their interest.

Dr. S. K. Ukarande Associate Dean Faculty of Science and Technology University of Mumbai Dr Anuradha Muzumdar Dean Faculty of Science and Technology University of Mumbai

Preface By BoS

Technological developments in the field of electronics and telecommunication engineering have revolutionized the way people see the world today. Hence, there is a need for continuously enriching the quality of education by a regular revision in the curriculum, which will help our students achieve better employability, start-ups, and other avenues of higher studies. The current revision in the Bachelor of Engineering program (REV- 2019 'C' Scheme) aims at providing a strong foundation with required analytical concepts in the field of electronics and telecommunication engineering.

Some of the salient features of this revised curriculum are as below and they fall in line with the features in AICTE Model Curriculum.

- 1. The curriculum is designed in such a way that it encourages innovation and research as the total number of credits has been reduced from around 200 credits in an earlier curriculum to 171 credits in the current revision.
- 2. In the second and third-year curriculum, skill-based laboratories and mini-projects are introduced.
- 3. It will result in the students developing a problem-solving approach and will be able to meet the challenges of the future.
- 4. The University of Mumbai and BoS Electronics and Telecommunication Engineering will ensure the revision of the curriculum on regular basis in the future as well and this update will certainly help students to achieve better employability; start-ups and other avenues for higher studies.

The BoS would like to thank all the subject experts, industry representatives, alumni, and various other stakeholders for their sincere efforts and valuable time in the preparation of course contents, reviewing the contents, giving valuable suggestions, and critically analyzing the contents.

Course Pre-requisite: Knowledge of Electromagnetic Engineering

Course Objectives:

The course should enable the students to:

- 1. Perceive the concepts of waveguides and analyze the field components in different types of Waveguides.
- 2. Categorize different types of microwave components based on their applications.
- 3. Imbibe knowledge to use microwave oscillators & amplifiers in microwave communication and Compare their characteristics. IV.
- 4. Demonstrate the ability to measure different microwave parameters using microwave bench setup.

Course Outcomes:

- 1. Describe the types of waveguides, rectangular waveguides and field equations
- 2. Understand the coupling mechanisms in waveguides and analyze the waveguide multiport junctions
- 3. Explore the microwave linear tubes and analyze with microwave cross field tubes
- 4. Understand the microwave solid state devices and avalanche transit time devices
- 5. Demonstrate the microwave bench set up and conducting measurements of different parameters

Module No.	Unit No.	Topics	Hrs.
1.0		TRANSMISSION LINES	06
	1.1	Transmission line equations, open and short circuit transmission lines, variation of impedance over length of line, Smith chart, use of Smith chart in impedance matching	
	1.2	Planar transmission lines: microstrip line, strip line and coplanar lines	
2.0		WAVEGUIDES	07
	2.1	Introduction, microwave spectrum and bands, applications of microwaves, Types of waveguides, rectangular waveguides, field equations in rectangular waveguide, field components of TM and TE waves for rectangular waveguide, modes of TM and TE waves in rectangular waveguide, impossibility of TEM waves, cut off frequency of rectangular waveguide; Wave impedance in rectangular waveguide: Wave impedance for a TM and TE wave in rectangular waveguide, Dominant mode and degenerate modes, mode characteristics of phase velocity, group velocity, wavelength and impedance relations; Illustrative problems; Cavity resonators: Types of cavity resonators; Rectangular cavity resonator: Dominant modes and resonant frequencies, illustrative	
2.0		problems. WAVEGUIDE COMPONENTS	0(
3.0	3.1	Coupling mechanisms: Probe, loop, coupling to a cavity resonator, waveguide discontinuities, waveguide irises, tuning screws and posts, matched loads; Waveguide attenuators; Waveguide phase shifters; waveguide	06
	3.2	multiport junctions: E plane Tee, H plane Tee, Magic Tee, applications of Magic Tee, hybrid ring; Ferrites: Faraday rotation principle, gyrator, isolator, circulator	
4.0		MICROWAVE TUBES	10
	4.1	Microwave linear beam tubes (O type): Limitations of conventional tubes at microwave frequencies; Klystron: Velocity modulation process, bunching process, output power and beam loading; Multicavity Klystron amplifiers: Beam current density, output current and output power of two cavity Klystron; Reflex Klystron: Velocity modulation, power output and efficiency.	
	4.2	Helix Traveling Wave tube: Slow wave structures, amplification process, conventional current; Microwave cross field tubes (M type): Introduction, cross-field effects; Magnetrons: Different types, 8-cavity cylindrical travelling wave Magnetron, Hull cut-off and Hartree conditions, modes of resonance and PI-mode operation.	
5.0		MICROWAVE SEMICONDUCTOR DEVICES	06
	4.1	Microwave solid-state devices: Microwave tunnel diode; Pin diodes, varactor diodes, crystal detectors. Transferred electron devices: Gunn-effect diodes, RWH theory, modes of operations; Avalanche transit time devices: IMPATT diode, TRAPATT diode, BARITT diode,	
6.0		MICROWAVE MEASUREMNETS	04

	6.1	Description of microwave bench: Different blocks and their features, precautions; Microwave power measurement: Bolometers; Measurement of attenuation; Frequency standing wave measurements: measurement of low and high VSWR; Cavity Q; Impedance measurements.

Internal Assessment (20-Marks):

Internal Assessment (IA) consists of two class tests of 20 marks each. IA-1 is to be conducted on approximately 40% of the syllabus and IA-2 will be based on remaining contents (approximately 40% syllabus but excluding contents covered in IA-I). Duration of each test shall be one hour. Average of the two tests will be considered as IA marks.

End Semester Examination (80-Marks):

Weightage to each of the modules in end-semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total 06 questions, each carrying 20 marks.
- 2. Question No: 01 will be compulsory and based on entire syllabus wherein 4 to 5 sub-questions will be asked.
- 3. Remaining questions will be mixed in nature and randomly selected from all the modules.
- 4. Total 04 questions need to be attempted.

Course Pre-requisite:

ECC405 - Principles of Communication Engineering

ECC501 - Digital Communication

ECC602 - Computer Communication and Networks

Course Objectives:

- 1. To understand the cellular fundamentals and different types of radio propagation models.
- 2. To study evolution of 2G and 3G mobile technologies.
- 3. To illustrate the working principle of LTE.
- 4. To learn the concepts of emerging technologies for 4 G standards and beyond.

Course Outcomes:

After successful completion of the course student will be able to:

- 1. Explain the cellular fundamentals and estimate the coverage and capacity of cellular systems.
- 2. Classify different types of propagation models and analyse the link budget.
- 3. Compare and contrast GSM, GPRS, HSCSD, EDGE and IS-95 Technologies.
- 4. Apply the concepts of 3G technologies for UMTS and CDMA 2000.
- 5. Describe the features and working principle of 3GPP LTE.
- 6. Discuss the emerging technologies for upcoming mobile communication systems.

Module No.	Unit No.	Topics	Hrs.						
1.0		Fundamentals of Mobile Communication	07						
	1.1	Introduction to Wireless Communication: Mobile Radio Telephony, Examples of Wireless Communication Systems	01						
	1.2	The Cellular Concept System Design Fundamentals: Frequency reuse, Channel assignment strategies, Interference and system capacity, Trunking and Grade of service, Improving Coverage and Capacity in Cellular System and related problems.	06						
2.0		Mobile Radio Propagation	08						
	2.1	Large scale fading: Free space propagation model, ground reflection (two-ray) model, practical Link budget design using path loss models. Self-learning: Basic propagation mechanisms, reflection, diffraction and scattering.	03						
	2.2	Small scale fading: Small-scale multipath propagation, parameters of mobile multipath channels, types of small-scale fading, Rayleigh and Ricean distributions.	02						
	2.3Features of all conventional multiple access techniques: Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Space Spectrum Multiple Access (SSMA), Space Division Multiple Access (SDMA), Orthogonal Frequency Division Multiple Access (OFDMA), OFDM-PAPR3.02G Technologies								
3.0		2G Technologies	08						
	3.1	GSM: GSM Network Architecture, air interface specifications, GSM signaling protocol architecture, GSM channels, GSM services and features, GSM multifare structure, GSM speech coding, GSM Call procedures, Authentication and security in GSM, and handoff procedures in GSM.	04						
	3.2	GSM evolution: GPRS, HSCSD and EDGE architecture, radio specifications							
	3.3	IS-95: CDMA air interface, CDMA channels, power control in CDMA system, handoff, and RAKE receiver.	02						
4.0		3G Technologies	05						
	4.1	UMTS: Objectives, standardization and releases, network architecture, air interface specifications, channels, security procedure, W-CDMA air interface, attributes of W-CDMA system, W-CDMA channels.	03						
	4.2	Cdma2000 cellular technologies: Forward and Reverse Channels, Handoff and Power Control.	02						
5.0		3GPP LTE	06						
	5.1	Introduction, system overview: Frequency bands and spectrum flexibility, network structure, protocol structure.	02						
	5.2	Physical layer: Frames, slots, and symbols, modulation, coding, multiple-antenna techniques	02						
	5.3	Logical and Physical Channels: Mapping of data onto (logical) sub-channels,							
6.0		Advanced techniques for 4G deployment and beyond	05						
	6.1	Multi-antenna Techniques: Smart antennas, Multiple input Multiple output systems.	02						
	6.2	Cognitive radio: Architecture, spectrum sensing. Software Defined Radio (SDR): Components and Applications.	02						

6.4	Introduction to 5G network and technologies used in 5G such as small cell concept, Massive MIMO, Beamforming, NOMA, and mm wave).

Course Objectives:

- 1. To describe the characteristics of computationally intensive algorithms
- 2. To identify the bottlenecks of intensive computations.
- 3. To learn various techniques to map DSP algorithms on hardware to improve performance.

Course Outcome:

After successful completion of the course students will be able to

- CO1: Explain various typical DSP algorithms and their applications
- CO2: Describe various methodologies/techniques to map DSP algorithms on Hardware
- CO3: Analyze various hardware architectures available to implementation DSP algorithms
- CO4: Evaluate and select efficient hardware architecture for implementation of given DSP algorithm.
- CO5: Design/propose hardware architecture for effective implementation of given DSP algorithm.

2		Efficient Algorithm to Architecture Mapping	07
	2.1	Design of N-bit incrementer, decrementer, complimenter,	
	2.2	Techniques to enhance circuit performance, pipelining and parallel processing, circuit design for N bit natural numbers, optimized circuit design for different functions	
3		Efficient Adder Architecture	07
	3.1	Introduction to Adder design, Variable Block Adder circuit design, Delay optimized Carry Look Ahead Adder	
	3.2	Carry Select Sum Adder, Conditional Sum Adder, Ling's Adder	
	3.3	Prefix and Parallel prefix adders, Running Average Circuit	
4		Efficient Multiplier Design	07
	4.1	Array Multiplier ,Signed and Unsigned Multiplier ,Booths Multiplier , Bough-Wooley Multiplier	
	4.2	Architecture of Squaring Circuit, Reconfigurable Constant Multiplier Design	
5		DSP Architecture Design	06
	5.1	Floating point representation IEE754, floating point operations-2's compliment representation, adder, subtractor, multiplier	
	5.2	CORDIC Architecture, FFT Architecture, FIR filter	
6		Efficient Design of Machine Learning Hardware	06
	6.1	Artificial Intelligence and Machine Learning, Software and Co-design Optimizations, Pruning, Systolic array convolution	
	6.2	Hardware-Level Techniques, RTL design of sum of differences, Energy efficient hardware accelerator design methodology for Neural Networks

- 3. <u>https://nptel.ac.in/courses/108105157</u>

Internal Assessment (20-Marks):

Internal Assessment (IA) consists of two class tests of 20 marks each. IA-1 is to be conducted on approximately 40% of the syllabus and IA-2 will be based on remaining contents (approximately 40% syllabus but excluding contents covered in IA-I). Duration of each test shall be one hour. Average of the two tests will be considered as IA marks.

End Semester Examination (80-Marks):

Weightage to each of the modules in end-semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total 06 questions, each carrying 20 marks.
- 2. Question No: 01 will be compulsory and based on entire syllabus wherein 4 to 5 sub-questions will be asked.

3. Remaining questions will be mixed in nature and randomly selected from all the modules.

4.Total 04 questions need to be attempted.

Course Pre-requisite:

1. ECC 604-Artificial Neural Networks and Fuzzy logic

Course Objectives:

At the end of the course, the students will be expected to:

- 1. Learn how to use TensorFlow for building and testing Deep Learning models
- 2. Compare various CNN architectures
- 3. Know the importance of Regularisation and Optimization techniques in Deep Learning networks
- 4. Learn Deep Learning models for working with sequential data
- 5. Understand motivation and functioning of the most common types of Autoencoders and apply such mechanisms to various learning problems.

Course Outcomes:

After successful completion of the course student will be able to:

- 1. Understand the fundamentals of Deep Learning
- 2. Understand the concepts of TensorFlow, its main functions, operations and the execution pipeline
- 3. Improve deep learning models using Regularization and Optimization techniques
- 4. Compare the Convolution Neural Network architectures and use them as per the application
- 5. Design and implement Sequence Neural Network systems and solve real-world problems
- 6. Illustrate the working of Autoencoders and use them for real-life applications

Module No.	Unit No.	Topics	Hrs.
1.0		Introduction to Deep learning	03
	1.1	History of Deep Learning- A Probabilistic Theory of Deep Learning	
	1.2	Introduction to Deep Feedforward Networks, Gradient Based Learning, Hidden Units	
	1.3	Architecture Design, Backpropagation Algorithm	
2.0		TensorFlow for Deep learning	06
	2.1	Introduction to TensorFlow using Python: Computational Graph, Key Highlights, Creating a Graph	
	2.2	Regression example, Gradient Descent, TensorBoard, Modularity, Sharing Variables, Keras	
	2.3	Preprocessing and Data Augmentation of Images and Datasets using TensorFlow	
3.0		Regularization and Optimization Techniques	06
	3.1	Regularization: Need of Regularization, L2 Regularization, L1 Regularization, Early Stopping and Dropout	
	3.2	Optimization: Challenges in NN Optimization, Gradient Descent Approaches, Parameter Initialization Approach, Adaptive Approaches - AdaGrad, RMSProp and Adam	
	3.2	Introduction to Batch Normalization	
4.0		Evolution of CNN in Deep Learning	08
	4.1	Review of CNN Architecture, Introduction of various CNN Architectures: LeNet, AlexNet, VGG, GoogleNet, ResNet and UNet	
	4.2	Comparison of CNN Architectures, Evaluation Parameters	
	4.3	Applications of CNN in Image Classification and Object Detection	
5.0		Sequence Modeling	08
	5.1	Recurrent and Recursive Nets: Recurrent Neural Networks, Bidirectional RNN, Encoder Decoder Architectures	
	5.2	Introduction to Long Short-Term Memory (LSTM) and Temporal Dependencies	
	5.3	Gated Recurrent Units (GRUs)	
	5.4	Applications of RNN in Real World- Image Captioning and Time Series Forecasting and Prediction	
6.0		Encoder Decoder Models	08
	6.1	Autoencoder: Encoder-Decoder Model, Training & Learning Manifold Space	
	6.2	Regularized Autoencoders: Sparse, De-noising and Contractive	
	6.3	Deep Autoencoder: Architecture and Working	
	6.4	Variational Autoencoders: Limitations of Autoencoders, Loss Function, Re- parameterization Trick, Latent Space Visualization	

	6.5	Applications of Autoencoders and Variational Autoencoders-Dimensionality Reduction, Image De-noising and Compression				
		Total	39

Course Pre-requisite:

Computer Communication Network Digital Encryption System

Course Objectives:

- 1. Understand the fundamentals of cloud computing .
- 2. Appreciate the importance of virtualization in cloud computing
- 3. Understand various cloud computing services and platforms
- 4. Understand application design concepts in cloud
- 5. Understand the security aspects of cloud computing
- 6. Understand the advances in cloud computing

Course Outcome:

After successful completion of the course student will be able to :-

1. Explain the fundamentals of cloud computing.

- 2. Interpret the significance of virtualization in the context of cloud computing
- 3. Describe cloud computing services working on AWS, Azure and Google cloud platforms
- 4. Explain application design aspects of cloud computing
- 5. Interpret security aspects to cloud computing.

6. Explain advances in cloud computing in terms of multimedia cloud, fog, edge computing and real applications of cloud.

Module No.	Unit No.	Topics	Hrs.
1.0	I	Introduction to Cloud	04
	1.1	Introduction to Cloud Computing, Cloud Characteristics, Cloud Computing Components, Comparing of Cloud Computing with Peer to Peer architecture, Client Server, Distributed, Grid, Cloud Deployment model (Cloud types- Public, Private, Community, Hybrid), Service Models-(IaaS,PaaS,SaaS,)	
2.0		Virtualization	07
2.0	2.1	Introduction & benefit of Virtualization – Implementation Levels of Virtualization- VMM Design Requirements and Providers – Virtualization at OS level – Middleware support for Virtualization– Virtualization structure/tools and mechanisms: Hypervisor and Xen Architecture, Binary Translation with full Virtualization, Para Virtualization with Compiler Support - Virtualization of CPU, Memory and I/O Devices, Hardware support for Virtualization in intel x86 processor – CPU Virtualization – MemoryVirtualization and I/O Virtualization – Virtualization in Multicore processors	19
3.0		Cloud Computing Services	10
	3.1	Compute Services - Amazon Elastic Compute Cloud, Google Compute Engine, Windows Azure Virtual Machines Storage Services - Amazon Simple Storage Service, Google Cloud Storage, Windows Azure Storage Database Services - Amazon Relational Data Store, Amazon DynamoDB, Google Cloud SQL, Google Cloud Datastore, Windows Azure SQL Database, Windows Azure Table Service Application Services - Application Runtimes & Frameworks, Queuing Services, Email Services, Notification Services, Media Services Content Delivery Services - Amazon CloudFront, Windows Azure Content Delivery Network	
		Analytics Services - Amazon Elastic MapReduce, Google MapReduce Service, Google BigQuery, Windows Azure HDInsight Deployment & Management Services - Amazon Elastic Beanstalk, Amazon CloudFormation Identity & Access Management Services - Amazon Identity & Access Management, Windows Azure Active Directory	
4.0		Open Source Private Cloud Software - CloudStack, Eucalyptus, OpenStack Cloud Application Design	06
	4.1	Design Consideration Design Design Considerations for Cloud Applications - Scalability, Reliability & Availability, Security, Maintenance & Upgradation, Performance Cloud Application Design Methodologies - Service Oriented Architecture, Cloud	
		Component Model, IaaS, PaaS and SaaS services for cloud applications, Model View Controller, RESTful Web Services, Data Storage Approaches - Relational (SQL) Approach, Non-Relational (No-SQL) Approach	
5.0		Cloud Security	06
	5.1	Security for Virtualization Platform – Host security for SaaS, PaaS and IaaS – Data Security – Data Security Concerns – Data Confidentiality and Encryption – Data Availability –Data Integrity – Cloud Storage Gateways – Cloud Firewall	
	5.2	AAA Administration for Clouds -AAA model – SSO for Clouds – Authentication management and Authorization management in clouds – Accounting for Clouds Resource utilization.	

6.0		Cloud Computing Applications	06					
	6.1	Cloud Computing for Health care, Education, Transportation, Manufacturing						
		Industry, Energy System, Mobile Computing						
	6.2 Multimedia Cloud - Introduction, Streaming Protocols - RTMP Streaming, HTTP							
		Live Streaming, HTTP Dynamic Streaming						
	6.3	Case Studies - Live Video Streaming App, Video Transcoding App, Edge						
		Computing, FOG Computing

ECCDLO 7014	Big Data Analytics	20	20	20	80	03			100		

Course Prerequisite:

Basic knowledge of Database Management System

Course Objectives:

- 1. To Provide an Overview of an exciting growing field of Big Data Analytics.
- 2. To introduce the tools required to manage and analyze big data like Hadoop, NoSql, Map Reduce.
- 3. To teach the fundamental techniques in achieving big data analytics with scalability and streaming capability

Course Outcome:

After successful completion of the course student will be able to

1. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing.

2. Acquire fundamental enabling techniques and scalable algorithms like Hadoop, MapReduce and NoSQL in big data analytics.

3. Interpret business models and scientific computing paradigms, and apply software tools for big data analytics.

4. Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc

5. Develop applications for Big Data analysis using Hadoop and NoSQL etc.

Module No.	Unit No.	Topics	Hrs
1		Introduction to Big Data Analytics	03
	1.1	Introduction to Big Data, Big Data characteristics, Types of Big Data, Traditional vs. Big Data a business approach	
	1.2	Technologies Available for Big Data, Infrastructure for Big Data, Big Data Challenges, Case Study of Big Data Solutions.	
2		Hadoop	05
	2.1	Introduction to Hadoop. Core Hadoop Components, Hadoop Ecosystem-Apache HBase, Hive, HCatalog, Pig, Mahout, Oozie, Zookeeper, Sqoop, Physical Architecture, Hadoop limitations.	
3		NoSQL	06
	3.1	Introduction to NoSQL, NoSQL business drivers, NoSQL database case studies.	
	3.2	NoSQL data architecture patterns: Key-value stores, Graph stores, Column family (Bigtable) stores, Document stores, Variations of NoSQL architectural patterns	
	3.3	Using NoSQL to manage big data: What is a big data NoSQL solution? Understanding the types of big data problems; Analyzing big data with a shared-nothing architecture; Choosing distribution models: master-slave versus peer-to-peer; Four ways that NoSQL systems handle big data problems Managing MongoDB database with CRUD operations.	
4		MapReduce	06
	4.1	MapReduce and The New Software Stack: Distributed File Systems, Physical Organization of Compute Nodes, Large Scale File-System Organization.	
	4.2	MapReduce: The Map Tasks, Grouping by Key, The Reduce Tasks, Combiners, Details of MapReduce Execution, Coping With Node Failures	
	4.3	Algorithms Using MapReduce: MapReduce WordCount Program, Matrix-Vector Multiplication by MapReduce, Relational-Algebra Operations by MapReduce, Matrix Operations, Matrix Multiplication by MapReduce.	
5		Techniques in Big Data Analytics	13
	5.1	Finding Similar Item: Nearest Neighbor Search, Similarity of Documents, Distance Measures: Euclidean, Jaccard, Cosine, Edit and Hamming Distance with its Examples	
	5.2	Mining Data Streams: Data Stream Management Systems, Data Stream Model, Examples of Data Stream Applications: Sensor Networks, Network Traffic Analysis Filtering streams: The Blooms filter.	
	5.3	Link Analysis: PageRank Definition, Structure of the web, dead ends, Using Page rank in a	

		search engine, Efficient computation of Page Rank: Page Rank Implementation Using MapReduce	
	5.4	Frequent Itemset Mining: Market-Basket Model, Apriori Algorithm, Algorithm of Park-Chen-Yu	
6		Big Data Analytics Applications	06
	6.1	Recommendation Systems: Introduction, A Model for Recommendation Systems: Collaborative-Filtering System, Content based system and its Examples.	
	6.2	Mining Social-Network Graphs: Social Networks as Graphs, Types of Social-Network. Clustering of Social Graphs: Applying Standard Clustering Techniques, Counting triangles using MapReduce.

ECCDLOC 7015	Software Defined Radio	20	20	20	80	03			100

Prerequisites:

- Computer Communication and Networks
- Mobile Communication Systems

Course Objectives: The objective of this course is

- 1. To introduce fundamental knowledge of Software Defined Radio (SDR) and Cognitive Radio (CR) technology in next generation networks.
- 2. To introduce the hardware and software requirements and design aspects of CR
- 3. To introduce the architecture, spectrum sensing, spectrum awareness and allocation in CR networks.
- 4. To introduce the various standards available in CR technology and GNU platform for experimentation.

Course Outcomes: After learning the course the students will be able to demonstrate the ability

- 1. To Learn the hardware and software architecture and various design principles of SDR
- 2. To understand challenges of receiver design and select suitable hardware and software for SDR.
- 3. To understand the functions, components and challenges of CR technology for better spectrum exploitation.
- 4. To analyze various spectrum sensing techniques in CR environment.
- 5. To understand and apply the techniques of dynamic spectrum allocation and scheduling in CR based networks.
- 6. To understand various standards of CR Technology and its role in next generation networks and GNU platform.

Module No	Unit No.	Торіс	No. of Hrs
		Software Defined Radio	5
1	1.1	Basic components of Software Defined Radios, Software defined radio hardware architectures	
	1.2	Distortion parameters - Sources and metrics of distortion in a transceiver, Nonlinear distortion and nonlinearity specifications, Power amplifiers: Nonlinear Distortion in Transmitted Signals	
		SDR Architecture and Components	8
2	2.1	Power amplifier Line-up for linearity & power requirement calculations, Linearization Techniques for nonlinear distortion in SDR, Pre distortion Techniques for nonlinear distortion in SDR	
	2.2	Digital Pre distortion Techniques for Linear/Nonlinear Distortion	
	2.3	SDR Software architecture, Software Tunable Analog Radio Components	
	2.4	Antenna Systems, Reconfigurable Digital Radio Technologies, Basic Digital Radio Components	
		Cognitive Radio	6
3	3.1	Cognitive radio features and capabilities: Cognitive radio architecture Functions of cognitive radio Dynamic spectrum access, Components of cognitive radio Interference temperature ,Spectrum sensing Spectrum analysis and spectrum decision	
	3.2	Research challenges in Cognitive Radio: Issues in spectrum sensing, Spectrum management issues Spectrum mobility issues, Network layer and transport layer issues, Cross-layer design for cognitive radio networks, Artificial intelligence approach for designing cognitive radio, Location-aware cognitive radio	
		Spectrum Sensing for Cognitive Radio	6
4	4.1	Challenges, Matched Filtering, Waveform-Based Sensing, Cyclostationarity - Based Sensing, Energy Detector-Based Sensing, Radio Identification, Cooperative Sensing, External Sensing, Statistical Approaches and Prediction.	
	4.2	Sensing Frequency, Hardware Requirements and Approaches, Multi- dimensional Spectrum Awareness	
5		Dynamic spectrum access and management in Cognitive Radio	8
	5.1	Spectrum access models : Exclusive-use model , Shared-use model Spectrum commons model	
	5.2	Dynamic spectrum access architecture: Infrastructure-based versus infra structure less cognitive radio network Centralized versus distributed dynamic spectrum access Inter- and intra-RAN dynamic spectrum allocation	
	5.3	Medium access control for dynamic spectrum access :	

		Optimal decision on spectrum sensing and spectrum access	
		Multichannel and multiuser MAC	
		Spectrum allocation and scheduling, Spectrum trading	
		Performance analysis of cognitive MAC protocols	
6		Advanced topics in Cognitive Radio	6
	6.1	Cognitive radio architectures for NeXt Generation (XG) networks	
	6.2	Cognitive radio standardization : IEEE SCC 41, IEEE 802.22 for wireless regional area networks (WRANs)

ECCDLO	Robotics	20	20	20	80	03			100	
7021										

Course Prerequisite: - Engineering Mathematics III and IV

Course Objectives:

- 1. To introduce the functional elements of Robotics
- 2. To impart knowledge on the direct and inverse kinematics
- 3. To introduce the manipulator differential motion and control
- 4. To educate on various path planning techniques
- 5. To introduce the dynamics and control of manipulators
- 6. To study about the localization, planning and navigation

Course Outcomes:

After successful completion of the course students will be able to

- Explain basic concept of robotics.
- Describe the differential motion, add statics in robotics
- Describe the various path planning techniques.
- Describe the dynamics and control in robotics industries.
- Write program to use a robot for a typical application
- Use Robots in different applications

Module	Unit	Topics	Hrs.

Internal Assessment (20-Marks):

Internal Assessment (IA) consists of two class tests of 20 marks each. IA-1 is to be conducted on approximately 40% of the syllabus and IA-2 will be based on remaining contents (approximately 40% syllabus but excluding contents covered in IA-I). Duration of each test shall be one hour. Average of the two tests will be considered as IA marks.

End Semester Examination (80-Marks):

Weightage to each of the modules in end-semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total 06 questions, each carrying 20 marks.
- 2. Question No: 01 will be compulsory and based on entire syllabus wherein 4 to 5 sub-questions will be asked.
- 3. Remaining questions will be mixed in nature and randomly selected from all the modules.
- 4. Total 04 questions need to be attempted.

Course pre-requisite:

Digital Communication Mobile Communication Systems

Course Objectives:

- 1. Learn the basics of 5G and beyond wireless communication
- 2. Study 5G network architecture and Heterogeneous Network and Small cells
- 3. Provide understanding of the key technologies and enablers of 5G and beyond communication systems.
- 4. Learn 5G technology like massive MIMO, mmWave etc.

Course Outcome:

After successful completion of the course student will be able to:

- 1. Distinguish between the major cellular communication standards (1G/2G/3G/4G/5G systems) and architecture of wireless communications networks.
- 2. Apply the 5G techniques e.g., massive MIMO, mmWave etc. for the design of communication systems.
- 3. Analyse various modulation and multiplexing techniques e.g., OFDM, NOMA etc.
- 4. Describe applications of cognitive radio in 5G Wireless Communications.

Module No.	Unit No.	Topics	Hrs.
1		Introduction	04
	1.1	Introduction to 5G Technology, Features, Requirements, Applications, 5G Services,	
		Introduction to 5Gi	
	1.2		
	1.2	Digital modulations (OFDM, 5G Technology Modulation Techniques) and	
		performance metrics, 5G Internet, Internet of Things and Context-Awareness, Software	
		Defined Networking, Network Function Virtualisation (NFV)	
2		5G Architecture	08
4	0.1	SGAICINECUIE	00
	2.1	5G Network Architecture, Cloud RAN(C-RAN), Definitions of Heterogeneous Networks, Radio Resource and Interference Management for Heterogeneous Networks, Traffic offloading scenarios for heterogeneous networks, mobility management and handover	
	2.2		
		Small cell deployments: different types, Deployment scenarios, performance and analysis, Energy efficient mechanism with BS sleep mode in green small cell networks, Game theory and learning techniques for self-organization in small cell networks, 3GPP RAN standards for small cell	
3		Mm Wave	08
	3.1		
		mmWave: Millimeter bands, radio-wave propagation Physical layer design and algorithms, mmWave MIMO challenges, channel modelling, channel estimation and Beam-forming. Types of transceivers, Merits and Demerits, Applications	
	3.2	Physical or Radio layer Technologies - Massive MIMO (Sub 6Ghz) -mm wave MIMO (above 6 GHz)	
4		NOMA	05
		Non orthogonal Multiple Access (NOMA), Different Types: power domain NOMA and code domain NOMA, Difference between Orthogonal multiple access and NOMA, Filter Bank multi carrier -Full duplex Radio Techniques, Precoding	
-			
5		Cognitive Radio for 5G Wireless Networks	08
	5.1	Introduction, Overview of Cognitive Radio Technology in 5G Wireless, Spectrum Optimisation using Cognitive Radio, Cognitive Radio and Carrier Aggregation, Energy- Efficient Cognitive Radio Technology	
	5.2	Cognitive Radios to Mitigate Interference in Macro/femto Heterogeneous Networks, Cognitive Radio enabled Operations, Interference Coordination: Orthogonality in the Time/Frequency domain, Intra-tier Interference mitigation, Compressive sensing	
6		Trends in 5G	06
		5G NR, Carrier Aggregation in 5G, Open RAN, Use cases of 5G:eMBB, URLLC and mMTC, Advance applications: Robotic surgery, driverless car and Industrial IoT (IIoT), Tactile Internet, 5G-IoT applications, AR/VR in 5G

Course Pre-requisite:

- Analog communication
- Digital Communication
- Computer Communication and Networks

Course Objectives:

- 1. To focus on Internet protocol, standards, services and administration.
- 2. To discuss the Internet security protocol and security services
- 3. To discuss multimedia communication standards and compression techniques
- 4. To add insights on software defined network & network automation
- 5. To introduce Internet of Things

Course Outcomes:

After successful completion of the course student will be able to:

- 1. Compare the protocols at each layer of TCP/IP protocol suite.
- 2. Explain the internet security aspects of protocols at various layers of TCP/IP protocol suite.
- 3. Apply the various compression algorithms for audio, image & video coding.
- 4. Categorize and design simple networked multimedia systems.
- 5. Compare integrated & differentiated services for quality of service.
- 6. Explain a software defined Network.

Module No.	Unit No.	Topics	Hrs.
1.0		Introduction to Internet	03
	1.1	What is the Internet, Evolution of the Internet, service description, Network protocol?	
	1.2	Overview of TCP/IP, layer functions	
2.0		Application Layer in the Internet	06
	2.1	Application Layer- Host configuration, DHCP, Domain Name System (DNS), Multicast DNS	
	2.2	Remote Login, TELNET and SSH, HTTPS, electronic mail	
3.0		Internet Security	05
	3.1	Network layer security (AH, ESP, IPsec)	
	3.2	Transport layer security (SSL), Application layer security (secure E mail- PGP, S/MIME)	-
	3.3	VPN Firewall, Intrusion Detection System.	
4.0		Multimedia Communications	10
	4.1	Information Representation- text, images, audio and video, Text and image compression, Audio and video compression, video	
	4.2	compression standards: H.261, H.263, P1.323, MPEG 1, MPEG 2, Other coding formats for text, speech, image and video	-
	4.3	multimedia transport across IP networks and relevant protocols such as RSVP, RTP, RTCP, DVMRP, Signalling Protocols: Real-Time Streaming Protocol (RTSP).	
	4.4	VoIP, IPTV	
5.0		Quality of Services (QoS)	07
	5.1	Integrated services (intserv): Architecture and Service Model, Resource Reservation Protocol (RSVP), Packet Scheduling Disciplines in the Internet	
	5.2	Differentiated Services (diffserv): Framework and Concept, Assured and Expedited Services, Packet Classification, Routers Internals and Packet Dropping Techniques	
6.0		Network Industry Trends & Automation	08
	6.1	Introduction to software defined networking, OPENFLOW	
	6.2	Why network automation? Simplified Architectures, Deterministic outcomes, Business Agility, Types of network automation, Device Provisioning, Data collection, Migrations, Configuration Management, Compliance, Reporting, Troubleshooting, Evolving from the management plane from SNMP to device APIs Impact of open networking, Network Automation in the SDN era.	
	6.3	Introduction to Internet of Things (IoT): Definition and characteristics of IoT, Physical design of IoT: Things in IoT, IoT Protocols.

ECCDLO 7024	Advanced Digital Signal Processing	20	20	20	80	03			100	

Course Pre-requisite:

ECC502 Discrete-Time Signal Processing

Course Objectives:

- 1. To develop a thorough understanding of power spectrum estimation and different models for the same.
- 2. To apply optimum linear filters, linear prediction, and adaptive filtering techniques for signal processing applications.
- 3. To process multi-rate data.
- 4. To develop multi-resolution analysis using wavelets.

Course Outcomes:

After successful completion of the course student will be able to:

- 1. Illustrate parametric and non-parametric techniques of power spectrum estimation.
- 2. Explain optimum linear filters and their different forms.
- 3. Perform linear estimation and prediction of discrete time signals.
- 4. Implement various types of adaptive filters for the given applications.
- 5. Design interpolator, decimator and sampling rate convertors for multi-rate signal processing.
- 6. Apply concepts of wavelets and filter banks for signal processing applications.

Module No.	Unit No.	Topics	Hrs
1.0		Power Spectrum Estimation	09
	1.1	Principle of Power Spectrum Estimation	
	1.2	Non Parametric Method of Power Spectrum Estimation: Modified Periodogram,	
		Bartlett's Method, Welch's Method, Blackman-Tukey Method	
	1.3	Parametric Methods for Power Spectrum Estimation: Relationships between the	
		Autocorrelation and the Model Parameters, AR, MA & ARMA Models	
	1.4	Introduction to Least-Squares Method for the AR Model Parameters and Yule-Walker	
• •		Method for the AR Model Parameters	
2.0		Optimum Linear Filters	03
	2.1	Wiener Filters	
	2.2	FIR Wiener Filter (Wiener-Hopf filter)	
	2.3	IIR Wiener filter (Non-Causal and Causal IIR Wiener Filter)	
2.0	2.4	Orthogonality Principle in Linear Mean-Square Estimation	0.7
3.0	2.1	Linear Prediction Forward and Backward Linear Prediction	05
	3.1		
	3.2	Solution of Normal Equation (Levinson-Durbin and Schur Algorithm)	
	3.3	AR Lattice and ARMA Lattice Ladder Filters	
	3.4	MMSE Estimation	
	3.5	Introduction to Kalman Filter, Matched Filter	
4.0	4.1	Adaptive Filters	07
	4.1	Adaptive Algorithms: LMS Algorithm, NLMS Algorithm, RLS Algorithm, Lattice	
	1.2	Ladder Algorithm	
	4.2	Applications of Adaptive Filters: System Identification, Adaptive Channel Equalization, Echo Cancellation, Adaptive Noise Cancellation	
		Self-Study: Suppression of Narrowband Interference in Wideband Signals, Adaptive Array	
5.0		Multi-rate Signal Processing	08
5.0	5.1	Introduction to Multi-rate Signal Processing	00
	5.2	Interpolation and Decimation, Sampling Rate Conversion by Non-integer Factor	
	5.3	Multistage Interpolation and Decimation	
	5.4	Polyphase Decomposition	
	5.5	Filter Banks: Quadrature Mirror Filter Banks	
	5.5	Self-Study: Subband Coding	
6.0		Introduction to Wavelets	07
0.0	6.1	Limitations of Fourier Transform and Short Time Fourier Transform, Introduction to	07
	0.1	Time-Frequency Tiling	
	6.2	Multi-resolution analysis using Discrete Time Wavelet Transform: Haar MRA,	
	012	Analysis of two band dyadic filter banks, Frequency response of the Haar Filter Bank	
	6.3	Introduction to Daubechies Wavelets	
	6.4	Application of Wavelet theory to Signal Denoising (Soft and Hard Thresholding)	
		Self-Study: Signal Compression, Image Compression

Course Objectives:

- 1. To understand basics of quantum computing
- 2. To understand mathematics required for quantum computing.
- 3. To understand building blocks of quantum computing.
- 4. To understand quantum algorithms.
- 5. To understand quantum hardware principles.
- 6. To understand tools for quantum computing.

Course Outcome:

After successful completion of the course student will be able to :-

- 1. Explain basic concepts of quantum computing
- 2. Explain mathematical fundamentals required for quantum computing.
- 3. Explain building blocks of quantum computing through architecture and programming models.
- 4. Explain quantum algorithms.
- 5. Explain quantum hardware building principles.
- 6. Explain usage of tools for quantum computing.

Module No.	Unit No.	Topics	Hrs.
1.0		Introduction to Quantum Computing	07
	1.1	Motivation for studying Quantum Computing	
	1.2	Origin of Quantum Computing	
	1.3	Quantum Computer vs. Classical Computer	
	1.4	Introduction to Quantum mechanics	
	1.5	Overview of major concepts in Quantum Computing	
		Qubits and multi-qubits states	
		Bloch Sphere representation	
		Quantum Superposition Quantum Entanglement

	Configuration and Variant Management, The Design for X System, Objective Properties	
	and Life Cycle Approach, New Product Development (NPD) and Strategies, Product	

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

- 1. To familiarize the students with various aspects of probability theory
- 2. To acquaint the students with reliability and its concepts
- 3. To introduce the students to methods of estimating the system reliability of simple and complex systems
- 4. To understand the various aspects of Maintainability, Availability and FMEA procedure

- 1. Understand and apply the concept of Probability to engineering problems
- 2. Apply various reliability concepts to calculate different reliability parameters
- 3. Estimate the system reliability of simple and complex systems
- 4. Carry out a Failure Mode Effect and Criticality Analysis

Module	Detailed Contents	Hrs
	Probability theory: Probability: Standard definitions and concepts; Conditional Probability, Baye's Theorem.	
01	Probability Distributions: Central tendency and Dispersion; Binomial, Normal,	08
01	Poisson, Weibull, Exponential, relations between them and their significance.	
	Measures of Dispersion: Mean, Median, Mode, Range, Mean Deviation, Standard	
	Deviation, Variance, Skewness and Kurtosis.	
	Reliability Concepts: Reliability definitions, Importance of Reliability, Quality	
	Assurance and Reliability, Bath Tub Curve.	
02	Failure Data Analysis: Hazard rate, failure density, Failure Rate, Mean Time To Failure	08
02	(MTTF), MTBF, Reliability Functions.	
	Reliability Hazard Models: Constant Failure Rate, Linearly increasing, Time Dependent	
	Failure Rate, Weibull Model. Distribution functions and reliability analysis.	
03	System Reliability: System Configurations: Series, parallel, mixed configuration, k out	05
03	of n structure, Complex systems.	
	Reliability Improvement: Redundancy Techniques: Element redundancy, Unit	
04	redundancy, Standby redundancies. Markov analysis.	08
04	System Reliability Analysis – Enumeration method, Cut-set method, Success	
	Path method, Decomposition method.	
05	Maintainability and Availability: System downtime, Design for Maintainability:	05
03	Maintenance requirements, Design methods: Fault Isolation and self-diagnostics, Parts	

	Analysis Total	39
06	Failure Mode, Effects and Criticality Analysis: Failure mode effects analysis, severity/criticality analysis, FMECA examples. Fault tree construction, basic symbols, development of functional reliability block diagram, Fault tree analysis and Event tree	05
	Replacement. Availability – qualitative aspects.	
	standardization and Interchangeability, Modularization and Accessibility, Repair Vs

	System										

- 1. The course is blend of Management and Technical field.
- 2. Discuss the roles played by information technology in today's business and define various technology architectures on which information systems are built
- 3. Define and analyze typical functional information systems and identify how they meet the needs of the firm to deliver efficiency and competitive advantage
- 4. Identify the basic steps in systems development

- 1. Explain how information systems Transform Business
- 2. Identify the impact information systems have on an organization
- 3. Describe IT infrastructure and its components and its current trends
- 4. Understand the principal tools and technologies for accessing information from databases to improve business performance and decision making
- 5. Identify the types of systems used for enterprise-wide knowledge management and how they provide value for businesses

Module	Detailed Contents	Hrs
01	Introduction To Information Systems (IS): Computer Based Information Systems, Impact of IT on organizations, Imporance of IS to Society. Organizational Strategy, Competitive Advantages and IS.	4
02	Data and Knowledge Management: Database Approach, Big Data, Data warehouse and Data Marts, Knowledge Management. Business intelligence (BI): Managers and Decision Making, BI for Data analysis and Presenting Results	7
03	Ethical issues and Privacy: Information Security. Threat to IS, and Security Controls	7
04	Social Computing (SC): Web 2.0 and 3.0, SC in business-shopping, Marketing, Operational and Analytic CRM, E-business and E-commerce – B2B B2C. Mobile commerce.	7
05	Computer Networks Wired and Wireless technology, Pervasive computing, Cloud computing model.	6

06	Information System within Organization: Transaction Processing Systems, Functional Area Information System, ERP and ERP support of Business Process. Acquiring Information Systems and Applications: Various System development life cycle models.	8

ILO 7017	and	20	20	20	80	03			100			
	Mitigation											
	Measures											

- 1. To understand physics and various types of disaster occurring around the world
- 2. To identify extent and damaging capacity of a disaster
- 3. To study and understand the means of losses and methods to overcome /minimize it.
- 4. To understand role of individual and various organization during and after disaster
- 5. To understand application of GIS in the field of disaster management
- 6. To understand the emergency government response structures before, during and after disaster

- 1. Get to know natural as well as manmade disaster and their extent and possible effects on the economy.
- 2. Plan of national importance structures based upon the previous history.
- 3. Get acquainted with government policies, acts and various organizational structure associated with an emergency.
- 4. Get to know the simple do's and don'ts in such extreme events and act accordingly.

Module	Detailed Contents	Hrs
01	 Introduction 1.1 Definition of Disaster, hazard, global and Indian scenario, general perspective, importance of study in human life, Direct and indirect effects of disasters, long term effects of disasters. Introduction to global warming and climate change. 	03
02	 Natural Disaster and Manmade disasters: 2.1 Natural Disaster: Meaning and nature of natural disaster, Flood, Flash flood, drought, cloud burst, Earthquake, Landslides, Avalanches, Volcanic eruptions, Mudflow, Cyclone, Storm, Storm Surge, climate change, global warming, sea level rise, ozone depletion 2.2 Manmade Disasters: Chemical, Industrial, Nuclear and Fire Hazards. Role of growing population and subsequent industrialization, urbanization and changing lifestyle of human beings in frequent occurrences of manmade disasters. 	09
03	Disaster Management, Policy and Administration	06

	3.1 Disaster management: meaning, concept, importance, objective of disaster management policy, disaster risks in India, Paradigm shift in disaster management.	
	3.2 Policy and administration:	
	Importance and principles of disaster management policies, command and co-	
	ordination of in disaster management, rescue operations-how to start with and how to proceed in due course of time, study of flowchart showing the entire process.	
	Institutional Framework for Disaster Management in India:	
	 4.1 Importance of public awareness, Preparation and execution of emergency management programme. Scope and responsibilities of National Institute of Disaster Management (NIDM) and National disaster management authority (NDMA) in India. 	
04	Methods and measures to avoid disasters, Management of casualties, set up of emergency facilities, importance of effective communication amongst different agencies in such situations.	06
	4.2 Use of Internet and softwares for effective disaster management. Applications of GIS,	
	Remote sensing and GPS in this regard.	
	Financing Relief Measures:	
	5.1 Ways to raise finance for relief expenditure, role of government agencies and NGO's	
05	in this process, Legal aspects related to finance raising as well as overall management	09
	of disasters. Various NGO's and the works they have carried out in the past on the	
	occurrence of various disasters, Ways to approach these teams. 5.2 International relief aid agencies and their role in extreme events.	
	Preventive and Mitigation Measures:	
	6.1 Pre-disaster, during disaster and post-disaster measures in some events in general	
	6.2 Structural mapping: Risk mapping, assessment and analysis, sea walls and	
06	embankments, Bio shield, shelters, early warning and communication	06
VO	6.3 Non Structural Mitigation: Community based disaster preparedness, risk transfer and	00
	risk financing, capacity development and training, awareness and education, contingency plans.	
	6.4 Do's and don'ts in case of disasters and effective implementation of relief aids.	
	Total	39

- 2. To identify and describe the basic principles and methodologies adopted in energy audit of an utility.
- 3. To describe the energy performance evaluation of some common electrical installations and identify the energy saving opportunities.
- 4. To describe the energy performance evaluation of some common thermal installations and identify the energy saving opportunities
- 5. To analyze the data collected during performance evaluation and recommend energy saving measures

Module	Detailed Contents	Hrs
01	Energy Scenario: Present Energy Scenario, Energy Pricing, Energy Sector Reforms, Energy Security, Energy Conservation and its Importance, Energy Conservation Act-2001 and its Features. Basics of Energy and its various forms, Material and Energy balance	04
02	Energy Audit Principles: Definition, Energy audit- need, Types of energy audit, Energy management (audit) approach-understanding energy costs, Bench marking, Energy performance, Matching energy use to requirement, Maximizing system efficiencies, Optimizing the input energy requirements, Fuel and energy substitution. Elements of monitoring& targeting; Energy audit Instruments; Data and information-analysis. Financial analysis techniques: Simple payback period, NPV, Return on investment (ROI), Internal rate of return (IRR)	08

03	 Energy Management and Energy Conservation in Electrical System: Electricity billing, Electrical load management and maximum demand Control; Power factor improvement, Energy efficient equipments and appliances, star ratings. Energy efficiency measures in lighting system, Lighting control: Occupancy sensors, daylight integration, and use of intelligent controllers. Energy conservation opportunities in: water pumps, industrial drives, induction motors, motor retrofitting, soft starters, variable speed drives. 	10
04	Energy Management and Energy Conservation in Thermal Systems: Review of different thermal loads; Energy conservation opportunities in: Steam distribution system, Assessment of steam distribution losses, Steam leakages, Steam trapping, Condensate and flash steam recovery system. General fuel economy measures in Boilers and furnaces, Waste heat recovery, use of insulation- types and application. HVAC system: Coefficient of performance, Capacity, factors affecting Refrigeration and Air Conditioning system performance and savings opportunities.	10
05	Energy Performance Assessment: On site Performance evaluation techniques, Case studies based on: Motors and variable speed drive, pumps, HVAC system calculations; Lighting System: Installed Load Efficacy Ratio (ILER) method, Financial Analysis.	04
06	Energy conservation in Buildings: Energy Conservation Building Codes (ECBC): Green Building, LEED rating, Application of Non-Conventional and Renewable Energy Sources	03
	Total	39

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

- 1. Handbook of Electrical Installation Practice, Geofry Stokes, Blackwell Science
- 2. Designing with light: Lighting Handbook, By Anil Valia, Lighting System
- 3. Energy Management Handbook, By W.C. Turner, John Wiley and Sons
- 4. Handbook on Energy Audits and Management, edited by A. K. Tyagi, Tata Energy Research Institute (TERI).
- 5. Energy Management Principles, C.B.Smith, Pergamon Press
- 6. Energy Conservation Guidebook, Dale R. Patrick, S. Fardo, Ray E. Richardson, Fairmont Press
- 7. Handbook of Energy Audits, Albert Thumann, W. J. Younger, T. Niehus, CRC Press
- 8. www.energymanagertraining.com
- 9. www.bee-india.nic.in

Course objectives:

- To understand the characteristics of rural Society and the Scope, Nature and Constraints of rural Development.
- To study Implications of 73rd CAA on Planning, Development and Governance of Rural Areas
- An exploration of human values, which go into making a _good' human being, a _good' professional, a _good' society and a _good life' in the context of work life and the personal life of modern Indian professionals
- To understand the Nature and Type of Human Values relevant to Planning Institutions

Course outcomes:

After successful completion of the course student will be able to

- Apply knowledge for Rural Development.
- Apply knowledge for Management Issues.
- Apply knowledge for Initiatives and Strategies
- Develop acumen for higher education and research.
- Master the art of working in group of different nature.
- Develop confidence to take up rural project activities independently

Module No.	Unit No.	Topics	Hrs.
1.0			08
	1.1	Introduction to Rural Development Meaning, nature and scope of development; Nature of rural society in India; Hierarchy of settlements; Social, economic and ecological constraints for rural development Roots of Rural Development in India Rural reconstruction and Sarvodaya programme before independence; Impact of voluntary effort and Sarvodaya Movement on rural development; Constitutional direction, directive principles; Panchayati Raj - beginning of planning and community development; National extension services.	
2.0			04
	2.1	Post-Independence rural Development Balwant Rai Mehta Committee - three tier system of rural local Government; Need and scope for people's participation and Panchayati Raj; Ashok Mehta Committee - linkage between Panchayati Raj, participation and rural development	
3.0			06
	3.1	Rural Development Initiatives in Five Year Plans Five Year Plans and Rural Development; Planning process at National, State, Regional and District levels; Planning, development, implementing and monitoring organizations and agencies; Urban and rural interface - integrated approach and local plans; Development initiatives and their convergence; Special component plan and sub-plan for the weaker section; Micro-eco zones; Data base for local planning; Need for decentralized planning; Sustainable rural development.	
4.0			04
	4.1	Post 73rd Amendment Scenario 73rd Constitution Amendment Act, including - XI schedule, devolution of powers, functions and finance; Panchayati Raj institutions - organizational linkages; Recent changes in rural local planning; Gram Sabha - revitalized Panchayati Raj; Institutionalization; resource mapping, resource mobilization including social mobilization; Information Technology and rural planning; Need for further amendments.	
5.0			10

Internal Assessment:

Assessment consists of two class tests of 20 marks each. The first class test is to be conducted when approximately 40% syllabus is completed and second class test when additional 40% syllabus is completed. The average marks of both the test will be considered for final Internal Assessment. Duration of each test shall be of one hour.

End Semester Examination:

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. The students need to solve total 4 questions.
- 3. Question No.1 will be compulsory and based on entire syllabus.
- 4. Remaining question (Q.2 to Q.6) will be selected from all the modules.

		Test1	Test2	Avg.	Exam.	(Hrs.)				
	Microwave									
ECL701	Engineering						25	25	50	
	Laboratory									

Course Objectives:

- 1. To become familiar working with rectangular waveguides and doing microwave bench set up
- 2. To determine the characteristics of various microwave components
- 3. To be able to measure wave parameters like impedance, frequency, wavelength using microwave bench and VSWR/power meter
- 4. To study characteristics and behavior of various microwave semiconductor devices.

Course outcomes: On completion of this lab course the students will be able to:

- 1. Able to handle microwave equipments
- 2. Able to understand microwave measurements and test the characteristics of microwave components
- 3. Able to understand Wave guide and transmission line measurements
- 4. Demonstrate working of microwave semiconductor devices
- 5. Demonstrate the microwave bench set up and conducting measurements of different parameters

	Suggested List of Experiments						
1	Measurement of microwave frequency using direct and indirect method						
2	Measurement of guide wavelength						
3	Measurement of VSWR of unknown load						
4	Measurement of impedance of unknown load.						
5	Study of field patterns of various modes inside a rectangular waveguide cavity using Virtual lab						
6	Study of field patterns of various modes inside a rectangular waveguide using Virtual lab						
7	Find the change in characteristics impedance and reflection coefficients of the transmission line by						
	changing the dielectric properties of materials Embedded between two conductors. using Virtual lab						
8	Determination of VI characteristics of Gunn diode using microwave test bench.						
9	Measurement of attenuation						
10	Measurement of microwave power						
11	Characterization of E plane TEE, H plane TEE and Magic TEE						
12	Measurement of reflection coefficient using transmission line bench						

Term Work:

At least 8 experiments covering the entire syllabus must be given "**Batch Wise**". The experiments can be conducted with the help of appropriate hardware setup/simulation tool (preferably open source)/breadboard and components. Teacher should refer the suggested list of experiments and can design additional experiments to acquire practical design skills. The experiments should be student centric and attempt should be made to make experiments more meaningful, interesting and innovative.

Term work assessment must be based on the overall performance of the student with every experiment and assignments graded from time to time. The grades will be converted to marks as per "Credit and Grading System" manual and should be added and averaged. Based on the above scheme grading and term work assessment should be done.

The practical and oral examination will be based on entire syllabus. Students are encouraged to share their experiments codes on online repository. Practical exam slip should cover all the 8 experiments for examination.

		Test 1	Test 2	Avg.	Exam.					
ECL702	Mobile Communication System Laboratory					25	25	50		

Course objectives:

- 1. To understand the inter-dependencies of design parameters of cellular system.
- 2. To examine orthogonality condition for CDMA systems.
- 3. To Classify different types of propagation models and analyze the link budget
- 4. To understand the working principles of OFDM, MIMO, and Cognitive radio.

Course outcomes:

After the successful completion of the course student will be able to

- 1. Demonstrate the effect of cellular system design parameters on system capacity and quality of service.
- 2. Compare and contrast trunking radio systems.
- 3. Examine the effect of small-scale fading parameters on the performance of radio channel characteristics.
- 4. Analyze link budget for various propagation path-loss models.
- 5. Summarize the attributes of OFDM, MIMO, and Cognitive radio.
- 6. Evaluate the performance of different MIMO systems.

Suggested list of experiments: (Course teacher can design their own experiments based on the prescribed syllabus)

Suggested Experiment List

- To observe the effect of velocity and direction of arrival of a vehicle on Doppler frequency.
- To observe the effect of Cluster size (N) on C/I ratio and comment on the voice quality.
- To observe the effect of incidence angle on reflection coefficient.
- To observe the effect of different propagation models on coverage distance.
- To analyze the effect of delay on blocking probability of a call for Erlang B and Erlang C systems.

- To observe the effect of C/I ratio in a sectorised cell site and perform worst case analysis for different values of N and degree of sectorisation
 - A) Worst case C/I in a 3-sector cellular system for N = 7
 - B) Worst case C/I in a 3-sector cellular system for N = 4
 - C) Worst case C/I in a 6-sector cellular system for N = 7
 - D) Worst case C/I in a 6-sector cellular system for N = 4
 - To generate Pseudo noise code used in a CDMA system.
 - To generate Walsh Codes using Hadamard Matrix.
 - To plot Knife edge diffraction gain as a function of Fresnel diffraction parameter.
 - To analyze the effect of multipath diversity (RAKE receiver) on Bit Error Rate in CDMA system.
 - To plot channel capacity versus SNR for different MIMO systems.
 - Simulation of OFDMA system.
 - GSM Network simulation.
 - CDMA Network simulation.
 - Simulation of spectrum sensing using energy detection method in cognitive radio.
 - Demonstration of OFDM / MIMO /Cognitive radio.

Term Work, Practical and Oral:

At least 8 experiments covering the entire syllabus must be given "**Batch Wise**". The experiments can be conducted with the help of simulation tool (preferably open source) and breadboard and components. Teacher should refer the suggested list of experiments and can design additional experiments to acquire practical design skills. The experiments should be student centric and attempt should be made to make experiments more meaningful, interesting and innovative.

Term work assessment must be based on the overall performance of the student with every experiment and assignments graded from time to time. The grades will be converted to marks as per "Credit and Grading System" manual and should be added and averaged. Based on the above scheme grading and term work assessment should be done.

The practical and oral examination will be based on entire syllabus. Students are encouraged to share their experiments codes on online repository. Practical exam slip should cover all the 8 experiments for examination.

Code		Test 1	Test2	Avg. Of Test	Sem.	1				
ECP701				1 and Test 2 	Exam	25	25		50	
	Major Project-1	1								

Objective: The Project work enables the students to develop the required skills and knowledge gained during the programme by applying them for the analysis of a specific problem or issue, via a substantial piece of work which is carried out over an extended period. It also enables the students to demonstrate the proficiency in the design of a research project, application of appropriate research methods, collection and analysis of data and presentation of results.

Guidelines:

1. Project Topic:

- To proceed with the project work it is very important to select a right topic. Project can be undertaken on any domain of electronics and telecommunication programme. Research and development projects on problems of practical and theoretical interest should be encouraged.
- Project work must be carried out by the group of at least two students and maximum four and must be original.
- Students can certainly take ideas from anywhere, but be sure that they should evolve them in the unique way to suit their project requirements.
- The project work can be undertaken in a research institute or organization/company/any business establishment.
- Student must consult internal guide along with external guide (if any) in selection of topic.
- Head of department and senior staff in the department will take decision regarding selection of projects.
- Student has to submit weekly progress report to the internal guide and whereas internal guide has to keep track on the progress of the project and also has to maintain attendance report. This progress report can be used for awarding the term work marks.

• In case of industry projects, visit by internal guide will be preferred.

2. **Project Report Format:**

At the end of semester a project report should preferably contain at least following details:-

- Abstract
- Introduction
- Literature Survey
 - a) Survey Existing system
 - b) Limitation of the Existing system or research gap
 - c) Problem Statement and Objective
 - d) Scope
- Proposed System
 - a) Analysis/Framework/ Algorithm
 - b) Details of Hardware & Software
 - c) Design details
 - d) Methodology (your approach to solve the problem)
- Implementation Plan for next semester
- Conclusion
- References

3. Term Work:

Distribution of marks for term work shall be as follows:

- a) Weekly Attendance on Project Day
- b) Contribution in the Project work
- c) Project Report (Spiral Bound)
- d) Term End Presentation (Internal)

The final certification and acceptance of TW ensures the satisfactory performance on the above aspects.

4. Oral & Practical :

- - -

Oral &Practical examination of Project-I should be conducted by Internal and External examiners approved by University of Mumbai. Students have to give presentation and demonstration on the Project-I.
