The session started with an inaugural speech by organizer of the event Archana Mahajan mam, Event Coordinator. She highlighted the key points why such kinds of workshops are required to sensitize our girl child/students to make them aware about the diseases related to women & take precautions to avoid them.

Dr. Yogita Bhadange has conducted A Session on "Common Health Issues Related to Women" for girl students & staff on 10th April 2018 on the Occasion of international Women's day" at our institute Vishwatmak Om Girudev College of Engineering, Mohili. The programme started with Pratiama puja. The programme started at 10.30 am and ended at 1:00 pm. In this programme

Dr. Yogita Bhadange highly spoke on the kind of Common Health Issues Related to Women She highlighted the Causes and precautions of the various diseases as follows,

- **HEART DISEASE-** Heart disease is the number one killer of women. Although it is typically viewed as a man's disease, more women actually die of heart disease each year than do men. On average, women develop heart disease later in life than do men. In addition, women are more likely to have other co-existing, chronic conditions that may mask their symptoms of heart disease than are men. Symptoms of a heart attack

in women may also differ from those in men, which can lead to a misdiagnosis of the disease in women.

- **CANCER-** Cancer is the second leading killer of women. Lung cancer, Breast cancer has been the leading cause of cancer death among women. With the increased use of mammography screening, breast cancers have increasingly been detected earlier in their development, when they are more treatable. This earlier detection, coupled with improved treatment, has led to a decline in death rates from breast cancer.
- **Stroke-** A stroke is usually caused by a clot that stops the flow of blood to an area of the brain. Stroke can cause paralysis, loss of speech, and poor memory. Stroke is the third leading cause of death for American women, and it kills more than twice as many women each year as breast cancer.
- **CHRONIC OBSTRUCTIVE PULMONARY DISEASE (COPD)-**COPD includes chronic bronchitis, emphysema, and asthmatic bronchitis, all of which obstruct airflow from the lungs.
- **HIV/AIDS -**Long considered a man's disease, HIV/AIDS is a public health problem among women. It is the fifth leading cause of death among women ages 25 to 44 and the third leading cause of death among African American women in this age group.
- **MENTAL ILLNESS-** Major depression and dysthymia (a less severe, more chronic form of depression) affect approximately twice as many women as men. Women are 2 to 3 times more likely to have certain types of anxiety disorders, including anxiety, panic, and phobic disorders. At least 90 per cent of all cases of eating disorders occur in women. In addition, a high correlation appears to exist between eating disorders and depression and between eating disorders and substance abuse.

Dr. Yogita explained causes and safety measures to be taken to avoid these diseases. Then participants explained their views and experiences about the Health Awareness session and how the session helped them.

 - 2) To provide knowledge about the different tips of self-protection to keep in mind in different situations.
 - 3) To show case and give demo on different self-defence techniques.
- **Activity Outcomes:** Awareness created among students and faculty about self defence
- **No of Participants:** 35 Girl students + 6 female faculties
- **Activity Details (with photos):**

The session started with an inaugural speech by organizer of the event Prof Vaishali Morankar, WDC head. She highlighted the key points why such kinds of workshops are required to sensitize our girl child/students to self-protect themselves in public places as well as at home. She also pointed out that this is the demand of the hour as we can relate ourselves to the news items of domestic violence, eve-teasing cases and other severe forms of violence against women and children which is pouring in on a day to day basis.

Mrs. Shashikala mam, the head trainer from Atma Malik School, spoke largely on the kind of violence's that is committed against women. She narrated some instances related to Domestic Violence, Dowry, Cruelty by husband & in-laws, Sexual Harassment in public, private, or the workplace, Stalking, Obscene Calls that comes to the Special Police Unit for assistance. She pointed out why it is necessary to attend and train oneself with this kind of workshop and training programmes. She said that having knowledge about self-defence techniques not only helps defend but also it builds confidence in oneself. She gave advices and tips to our girl students on how to avoid situations and circumstances that may lead to unwanted/untoward incident.

The Demonstration Session:

After the inaugural session and felicitation ceremony, demonstration of the self-defence technique followed under the command of Ms. Shashikala mam. The tips she elaborated on how to self-protect and defend are:

First tip: Prevention is the best self-defence- Attackers, whatever their objectives, are looking for unsuspecting, vulnerable targets. So be sure to follow general safety tips like being aware of your surroundings, only walking and parking in well-lit areas, keeping your keys in hand as you approach your door or car, varying your route and times of travel, and other personal security precautions. Apart from avoiding confrontation, if you can defuse a situation (talk someone down from physically assaulting you) or get away—by handing over your wallet/purse or whatever they want, do that. Hand over your money rather than fight. Nothing you own is worth more than your life or health. If violence is unavoidable, however, to really defend yourself, you'll want to know ahead of time how to fight back effectively—it's possible even against someone bigger or stronger than you.

Second tip: Get Loud and Push back-As soon as the attacker touches you or it's clear that escape isn't possible, shout loudly (—BACK OFF!) and push back at him or her. This does two things: it signals for help and it lets the attacker know you're not an easy target. It may not dissuade all attackers, but getting loud will warn off those that were looking for easy prey.

Third tip: Remember the Most Effective Body Parts to Hit-When you're in a confrontation, you only have a few seconds and a few moves to try before the fight may be decided. Before an attacker has gained full control of you, you must do everything you can— conserving as much energy as possible—to inflict injury so you can get away. So aim for the parts of the body where you can do the most damage easily: the eyes, nose, ears, neck, groin, knee, and legs. Depending on the position of the attacker and how close he is will determine where you will strike and with what part of your body you will employ. Do not step in closer, say, to strike his nose with your hand, when you can reach his knee with a kick

Valedictory session: A brief interaction of the visiting team with the students followed after the demo session. A group of girl students interacted with the Mrs Shashikala mam about the different aspects of training.
